

ABSENCE OF PFAS IN BISOL PRODUCTS

Dear valuable partner,

In BISOL, we have always been an ambassador of health, both in nature surrounding us, as well as in fellow human beings – our colleagues, customers and the humanity around the world. While producing solar products, which enable green transformation of our society, we strive towards not only following, but even exceeding the required standards that are much stricter and more stringent here in European Union than anywhere else on Earth regardless.

PFAS stands for poly- and perfluoroalkyl substances, which are a group of man-made chemicals that include perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA). These elements have harmful effects for health and the environment, which are or are being phased out by law (already placed on the REACH list).

We hereby declare that we do not add poly- and perfluoroalkyl substances (PFAS) to the formulation of our products and, based on officially signed and stamped statements received from the whole list of our material suppliers, our raw materials do not contain these substances either.

We will continue to carefully review and choose every detail incorporated into our top-notch solar products to ensure you that by choosing BISOL, you included a trustworthy first-class solar brand into your portfolio.
